Test Strategy

Date of test	Component to be tested	Type of test to be carried out	Prerequisites and dependencies
25/03/2026	Navigation Bar	Black box testing → functional testing: Integration testing	No data should be needed to be entered, and the navigation bar functionality must be successfully completed including the linked pages of the digital solution. Each link must be tested out to see if correct results actually appear, this includes Home, Shop, Producers, About Us, Contact, etc. Navigation should also not break if navigation links are constantly being clicked.
25/03/2026	Home Page	White box testing, Black box testing → Functional testing: Unit and Integration testing	There should be no data needed in the home page, the design including the CSS must be complete and the functionality as well like buttons. Buttons like “Shop Now”, “Meet Our Producers” and “View all Products” must be tested to see if they work and actually send the user to the correct pages. They should also be tested to be clicked multiple times quickly, and they should not redirect to incorrect sections of the digital solution.
25/03/2026	Register Page	Black box testing → Functional testing, validation testing	Test data will be needed. The Registration page must be created and the system must be connected to the database. Adding migration and updating database must have been done and the controller logic must be included as well. Testing the registration process using valid and invalid data to see how the system handles validation. **Example Test Data:**

			Normal Test Data (Valid): Email: example@yahoo.com Password: Example123! **Erroneous** Email: Example.com Password: examplepassword **Extreme:** Email: example.example123@yahoo.com Password: Ex123! (Just long enough email, and a password with exactly 6 characters which is the minimum) System should handle incorrect registering attempt successfully showing suitable error messages for different errors.
25/03/2026	Login System	White box testing, Black box testing → Functional and Security testing	Test data will be needed for testing. The login page must be successfully created, migration and updating the database as well. All backend controller logic must have been implemented correctly. The testing must be done using valid and invalid login credentials, security vulnerabilities, session management and password encryption. **<u>Example Test Data:</u>** **Normal Test Data (Valid):** Email: testing@yahoo.com

			Password: Testing123! **Erroneous** Email: Testing.com Password: testingpassword **Extreme:** Email: testing.testing123@yahoo.com Password: Te123! (Just long enough email, and a password with exactly 6 characters which is the minimum) The solution should not allow any user from logging in using incorrect credentials and the appropriate error message must always be displayed.
25/03/2026	Account Profile Page	Black box testing → Integration and Usability testing	Data will be needed for testing this component. User must be logged in to gain access to their account information otherwise user must be redirected to the login page. The account information of user must be securely stored inside the database and displayed correctly in the page. The page must be tested for viewing and also updating the personal information. **<u>Example Test Data:</u>** **Normal Test Data (Valid):** First Name: Adam Last Name: Mcarthy Email: testing@yahoo.com Phone: 07911123456

			Erroneous First Name: A123 Last Name: M456 Email: @testing.com Phone: 0712 **Extreme:** First Name: AAAAAAAA… (50 Characters which is the limit) Last Name: M (Minimum characters is) Email: t@yahoo.com Phone: 07911123456 (Just long enough email, and a password with exactly 6 characters which is the minimum) The digital solution must display the appropriate error message when incorrect data is entered. The must be integrated correctly without affecting the layout and key elements. The data displayed to the user must be correct.
25/03/2026	About Page	White box testing, Black box testing → Functionality testing: Integration and Unit testing.	There should be no data needed in this page. The design including the CSS must be complete, navigational links must redirect the user to correct page. The contents in the page should be accurate and meeting the requirements. Words and headers should be correct, the menu and layout should be tested to check if it breaks.
25/03/2026	Shop Page	Black box testing → Integration testing	Data is required for testing. The design of the page should be complete including the functionality such as filtering methods and the search bar. The product listings must display correct and necessary information like the price,

			availability, name, stock and producer name. **<u>Example Test Data:</u>** **Normal Test Data (Valid):** Exact match: Herb Tea Blend Partial match: Tea Case insensitive: herb tea blend **Erroneous** Empty search: (blank) **Extreme:** Minimum characters: T System must always display matches when a search word is matched to a product name in the database. If search left empty, the solution must not update the page. If user enter the minimum number of characters, then page must return products containing a word starting with the character. Filtering buttons should work even combined with search. User must be able to search for bread and sort them by price for example.
27/03/2026	Add to Cart	Black box testing → Integration testing	Test data will be needed. To add to cart a user does not need to be logged in but when proceeding to checkout from the shopping cart, the user must be logged in otherwise they must be redirected to the login page. Product must be displayed in the cart when added, and the

			cart icon badge number must increase after adding a product. Shopping cart must successfully display the price, quantity and total of each product added to the cart. Delivery or collection option must be displayed and the total sum of the order before purchasing. Cart total must update when user updates the quantity. **<u>Example Test Data:</u>** **Normal Test Data (Valid):** Add single product Add multiple products Add same product twice **Erroneous** Add product that is out of stock **Extreme:** Add product with quantity of stock level Cart should not allow the user to add a product that is out of stock. The solution should allow adding a quantity of a product that matches the stock level, however if stock level decreases while products still in cart, then the product should be removed from cart.
27/03/2026	Order Placement	Black box testing → Integration testing	Data is needed for this test. Only logged in users are able to place an order. The order must be automatically saved to the database, and a confirmation message must be displayed. Refreshing the page should not duplicate any

			orders. To place an order, the shopping cart must contain at least one product with stock level above zero. A fulfilment method must have been chosen. **<u>Example Test Data:</u>** **Normal Test Data (Valid):** Logged in user, cart with 1 in stock product, delivery Logged in user, cart with multiple products, collection **Erroneous** Not logged in, attempt to place an order **Extreme:** Buying a product with the quantity of stock level
27/03/2026	Contact Us Page	Black box testing → Validation testing	Data is needed. Contact Us page design must be complete, including functionality such as the form and “Apply as a Producer” button. Information displayed in the page must be correct and validation must be implemented to the form. **<u>Example Test Data:</u>** **Normal Test Data (Valid):** First Name: Adam Last Name: Mcarthy Email: testing@yahoo.com Subject: Order Inquiry Message: I have a question about my recent order.

			Erroneous First Name: A123 Last Name: M456 Email: @testing.com Subject: (Blank) Message: (Blank) **Extreme:** First Name: AAAAAAAA… (50 Characters which is the limit) Last Name: M (Minimum characters is) Email: t@yahoo.com Subject: sasasasasasaa... (256 characters) Message: bbbbbbbbbb… (256 characters) (Just long enough email, and a password with exactly 6 characters which is the minimum)
27/03/2026	Accessibility Features	Black box testing → Usability and Accessibility testing	No data needed. Features like text size increase/ decrease, high contrast mode and dark mode must be implemented successfully. The features should not break when they are on. The solution must usable and readable when they are implemented.
